

SMART Touch Zone Configuration

Selecting 'Configure Zones' brings up the following screen...

Creating a new zone

Enter the new zone name and select an icon for the zone, then press 'Create'.

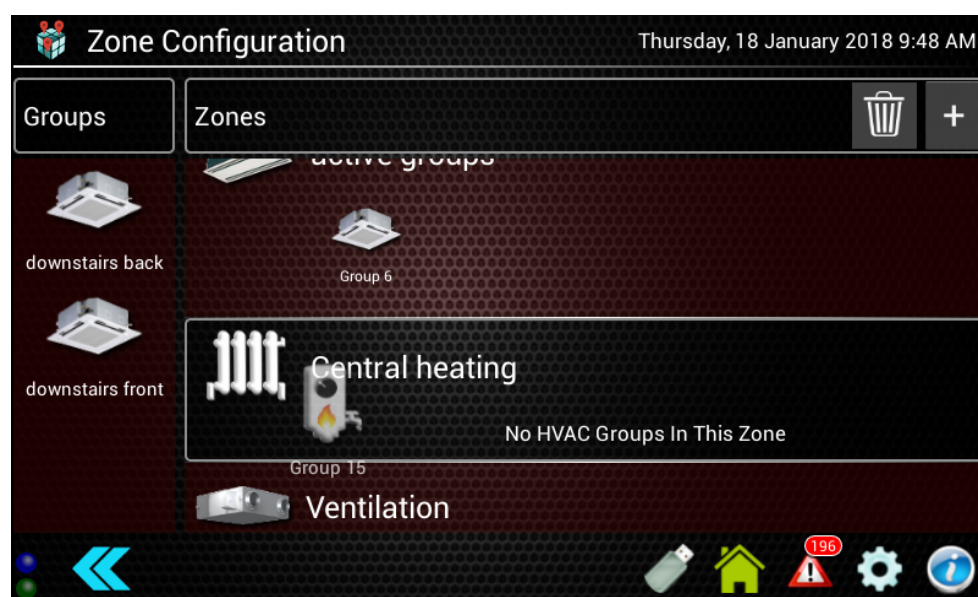

The new zone will now appear in the zone list, but will not contain any groups.

Attaching groups to zones

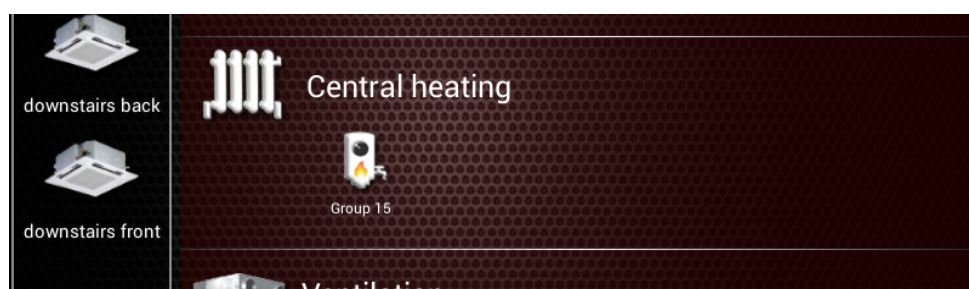

First ensure the zone being modified is visible on the screen...

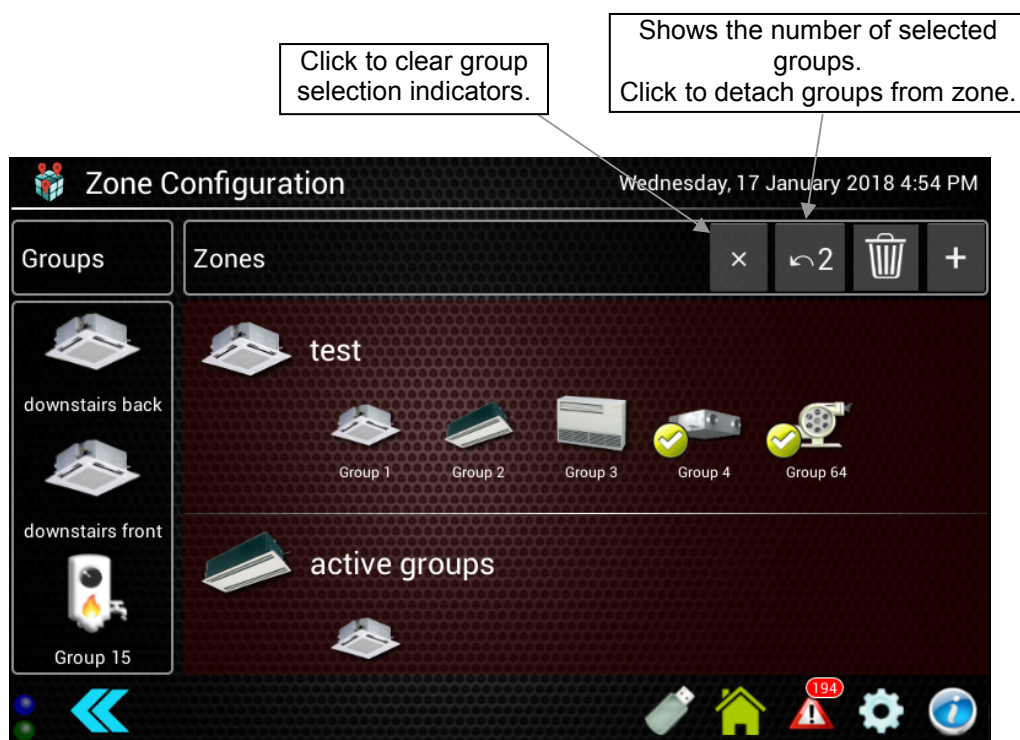

Now press and hold the group icon to be attached until it can be dragged, and move it over the appropriate zone...

The zone will be highlighted, at which point 'letting go' of the group icon will attach it to that zone.

Detaching groups from zones

Clicking on attached groups toggles the selection indicator. Multiple groups in multiple zones can be selected. Pressing the 'detach' button removes the selected groups from the zones and they will reappear in the unattached group list.
